## **ENGINEERING**

Experience gained from consultancy roles to a variety of engineering organisations provides the knowledge and skill base underpinning the services developed and offered by Scaled Management Systems for the engineering sector.

Scaled Management Systems appreciates and recognises the complexities of managing the potentially dynamic and highly variable workplaces found within engineering. These complexities are increased when required to work on a client's site or engage in jobbing shop / project management.

It requires a complete understanding of project management to deliver an integrated approach when introducing improvements for:-

- Client management and customer satisfaction;
- Employee skill development and training in engineering techniques;
- Environmental management;
- Occupational Health, Safety & Welfare (OHSW) management;
- Process control, improvement and re-design;
- Resource management & scheduling;
- Workers' Rehabilitation & Compensation management;

As a registered competency assessor and trainer (#4635) with the Manufacturing and Engineering Assessment System (MEAS) of Manufacturing Skills Australia, Scaled Management Systems can assist clients in the engineering sector with employee development if alignment is needed with the Metal and Engineering National Competency Standards.

For additional information regarding the National Metal and Engineering Industry Competency Standards please refer to [www.mersitab.com.au](http://www.mersitab.com.au)

Client portfolios have included:

- Adelaide Anodizing;
- ADL Engineering;
- Elecmo Services.
